To whom it may concern

Re: **Daniel Bello**, DOB 23 February 2020, patient at this practice (NHS no. 416 022 4733)

I write to confirm that I am Daniel Bello's named GP. Daniel has been registered at Riverside Medical Practice since August 2021. Over the past six months he has been seen at this practice on four occasions in connection with persistent cough and associated wheeze (14.07.2025, 09.09.2025, 07.11.2025 and 11.12.2025) and once by the South East London out-of-hours service for the same complaint (overnight, 16/17.09.2025).

Daniel has no family history of asthma. On clinical examination there are no findings indicative of an underlying long-term respiratory condition. We have prescribed a salbutamol 100 mcg inhaler on an as-required basis and have advised the family on spacer technique.

Daniel's mother, Ms Crystal Bello, has informed me that there is significant damp and visible black mould throughout the family's council flat, particularly affecting Daniel's bedroom and the bathroom. She has shown me photographs taken in the property which appear consistent with her account. Whilst I am not able to definitively attribute Daniel's symptoms to any single cause, in my clinical opinion the living conditions described and photographed are likely to be a contributing factor to his ongoing respiratory symptoms.

There is good evidence in the medical literature (NICE NG149; WHO Guidelines for Indoor Air Quality 2009) that prolonged exposure to indoor damp and mould is associated with increased respiratory morbidity in young children, including cough, wheeze and exacerbation of asthma where present.

I would be grateful if any information contained in this letter could be taken into account by the relevant housing department in considering the urgency of remediation works at the family's address. I would also be happy to provide further information on written request.

Yours faithfully,

Hannah McNaughton
